

Triad Owner's Manual

How Triad works

Attach your Triad Key fob directly to your vehicle's ignition key. Upon entering your vehicle, simply insert your ignition key into the lock cylinder and turn your key to start. In a fraction of a second Triad will read your Transfob Transponder, confirm you as an authorized user and engage your ignition. If you are using an Emergency Card, turn the key to the run position and hold the card next to the ignition or by the LED. LED will turn Green.

To confirm your system is operating properly, attempt to start your vehicle with your Transfob removed from your key ring. Your vehicle will not start indicating Triad's "Ignition Lockout" has been activated.

Triad's hidden antenna begins searching for your coded Triad Transfob as your ignition key is turned. Triad will "Beep" twice, indicating it is reading the unique digital code of your TIRIS transponder and comparing it to authorized codes in the systems memory. If an authorized code is seen, Triad's LED will change from Red to Green and engage your ignition.

Usually located to the lower right of the steering column, Triad's dual color LED (*flashing light*) gives continuous information of system status. The LED in conjunction with your Triad window decals, warns potential thieves that your vehicle is protected. Hidden inside your steering column housing is Triad's communication antenna. When you attempt to start your vehicle, Triad begins searching for the unique digital signature of your Triad Transfob.

Triad III

If your vehicle has a steel steering column, or you have a motor home, you may have a Triad III installed. The Triad III may have the antenna located at the LED and will start searching when the brake pedal is pressed. To operate the system, press the brake pedal and hold the transponder next to the LED. The light will turn green and you may start the vehicle.

Unlike conventional alarms with external transmitters, Triad is a "Close Proximity Device". Its "RF" (radio frequency) signal transmits only 4"-6" inches making it impossible for thieves using even sophisticated "Code Grabbers" to duplicate.

Triad Computerized Key Chain
"FOB"

Triad Customer Emergency Card (optional)

Triad has been in the market for over 14 years. We have not had a stolen vehicle for the life of this wonderful product. We still offer Triad to our customers as well as other great security and safety products. Please tell a friend about us. We like other companies have had to discontinue our 24 / 7 customer assistance support line. Our web site will offer a great deal of information with regard to Triad. We thank you for your business and we look forward to protecting you, and your vehicles from theft.
